Use of non-inducible immunity-1 gene - for transforming plants to produce transgenic plants having a broad spectrum disease resistance

Claim 12; Pages 155-159; 205pp; English.

This cDNA encodes an altered form of the Arabidopsis thaliana noninducible immunity-1 (NIMI) protein. Sequences shown in AAV43661 to
AAV43665 represent variants of the NIMI cDNA. The invention provides a
chimeric gene comprising a promoter active in plants operatively linked
to a DNA molecule that encodes an altered form of the NIMI protein. Plant
cells stably transformed with a recombinant vector comprising such a
chimeric gene have a broad spectrum of disease resistance. The altered
chimeric gene have a broad spectrum of disease resistance. The altered
continued session and altered NIMI gene exhibits constitutive SAR
appression which is higher in the transformed plants than in a wild-type
continued sease resistance. Overexpression of NIMI mimics the effects

This protein is used in a method resulting in the protection of an immunomodulated plant having a first level of resistance and involves treatment with at least 1 microbicide that confers a second level of resistance, such that the plants have a third level of resistance greater than the sum of the first two levels. The method can be applied to a wide variety of plants (cereals, fruits, oilseeds, vegetables etc.) to protect against viruses, fungi, bacteria, insects and nematodes. The method of micobicide used. Since the process involves two different method of micobicide used. Since the process involves two different methods of protection, it is unlikely that the pathogen will develop resistance to

This cDNA encodes an altered form of the Arabidopsis thaliana non-
inducible immunity-1 (NIM1) protein. Sequences shown in AAV43661 to

AAV44656 represent variants of the NIM1 cDNA. The invention provides a
chimeric gene comprising a promoter active in plants operatively linked
consistency stably transformed with a recombinant vector comprising such a
chimeric gene have a broad spectrum of disease resistance. The altered
chimeric gene have a broad spectrum of disease resistance. The altered
chimeric gene have a broad spectrum of disease resistance. The altered
consistence (SAR) signal transduction pathway. The transgenic
constraint and altered NIM1 gene exhibits constitutive SAR
expression which is higher in the transformed plants than in a wild-type
plant: The products can be used for producing plants with a broad
spectrum disease resistance. Overexpression of NIM1 mimics the effects
of inducer compounds that induce constitutive immunity (CIM) phenotype
cof inducer cambounds that induce constitutive immunity (CIM) phenotype
cof in plants. The inventions can be used with plants such as rice, wheat,
cof incory, lettuce, cabbage, cauliflower, broccoli, turnip, radish,
conticory, lettuce, cabbage, cauliflower, broccoli, turnip, radish,
conticory, peach, nectarine, aprailic, eggplant, pepper, celery,
conticory, pampkin, zucchini, cucumber, appare, peac, quince, melon, plum,
conterry, peach, nectarine, avocado, papaya, mango, banana, soybean, tobacco,
conterry, pathogens such as viruses, virioids, fundi, bacteria, insects such
contervants.
contervants produced are resistant to
contervants applies and nematodes. The plants produced can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                       Description

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anote—"Vector: lambda Zip-Lox; Site_1: Sal; Site_2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mRNA. The mRNA sources were 1) 7 day germinated etiolated seedlings: 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and siliques. The vector is BRL's lambda Zip-Lox. The cDNA linears were directionally cloned with Sal-Not arms using

/note="Vector: lambda Zip-Lox; Site_1: Sal; Site_2: Not;
Lambda PRL2 is a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark- rosettes; 4)
same plants as 3 but aerial tissue (stems; 2000)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 (bases 1 to 258)
